MOTION PICTURE REVIEW AND VAUDEVILLE ATTRACTIONS

NEWS OF THE WEEK IN THE PICTURE WORLD

(This column appears every Tuesday and Friday)

Church Shows Films.

An Appleton, Wis., dispatch says: Moving pictures, illustrating various popular subjects will replace the regular services in the Congregational church in this city Sunday night in the future, the first being shown at the services last Sunday evening when the pastor, the Rev. Dr. John Faville, preached on the subject "Religious Possibilities of Moving Pictures."

Ten-Cent Vaudeville Again.

The local picture houses which raised their price of admission to fifteen cents a little over a week ago have dropped it again to ten cents, with one exception. "This house—the Crown"—asserts that it "will maintain the fifteen cent rate, as conditions which warranted the increase have not changed, and if the people want the best there is in vaudeville they should be willing to pay for it." As it is, the Crown suffered very little from loss of patronage since they advanced the price, and anticipate no trouble in maintaining it and drawing their customary crowd.

Three Big Acts at Crown.

The Crown presented to a capacity house last evening three entertaining vaudeville acts and three reels of excellent pictures.

James and Sterling in a singing, talking and dancing sketch; Maybelle Milton, character songs and impersonations; and Armand and Alta, in a riot of comedy, followed each other closely on a bill that was well-balanced and full of variety. The same program will be given this evening with the exception of an entire change of pictures.

Educational at the Royal.

"The Queen's Pity," "Saving the Audience," "Broncho Billy's Escapade" and an educational film depicting the war on the mosquito, are the films shown at the Royal.

Week by week the picture manufacturers contribute to the storehouse of scientific research and never before the invention of the motion picture has science been brought to the layman in so entertaining and instructive a manner. In this film, wonderful in every sense, is shown the growth, development and life of the mosquito, now known as one of the most dangerous of disease-bearing insects.

Keeps Your Stove "Always Ready for Company"

A bright, clean, glossy stove is the joy and pride of every housekeeper. But it is hard to keep a stove nice and shiny—unless Black Silk Stove Polish is used.

Here is the reason: Black Silk Stove Polish sticks right to the iron. It doesn't rub off or dust off. Its shine lasts four times longer than the shine of any other polish. You only need to polish once a month as often, yet your stove will be cleaner, brighter and better looking than it has been since you first bought it. Use

BLACK SILK STOVE POLISH

on your parlor stove, kitchen stove or gas stove. Get a can from your hardware or stove dealer. If you do not find it better than any other stove polish you have ever used before, your dealer is authorized to refund your money. But we feel sure you will agree with the thousands of other up-to-date women who are now using Black Silk Stove Polish and who say it is the "best stove polish ever made."

LIQUID OR PASTE ONE QUALITY

Be sure to get the genuine. Black Silk Stove Polish costs you no more than the ordinary kind. Keep your graters, registers, fenders and stove pipes bright and free from soot by using BLACK SILK STOVE POLISH. Brush free with each can of enamel only.

Use BLACK SILK METAL POLISH for silverware, nickel, tinware or brass. It works quickly, easily, and leaves a brilliant surface. It has no equal for use on automobiles.

Black Silk Stove Polish Works

GAME AND FISH OF MUCH VALUE

Game Warden Oates Says Protection is Not a Fad

"The average resident of Michigan has little, if any, idea of the value, in dollars and cents, of the game of the state," State Game Warden Oates remarked, in discussing the activities of his department with a Marquette Mining Journal man. "The idea is held by many persons, that the game is a burden to the state, and that from the financial viewpoint Michigan would be further ahead if it was entirely exterminated. Nothing could be further from the fact. The game is a great resource, and one that should be conserved as all other natural resources should be conserved."

"Another erroneous idea held in regard to the operations of the state department for the protection of game and the supervision of the fisheries is the one that is a source of expense to the state. Here again the popular view is erroneous. The department is supported wholly from fees and hunters' licenses. Last year the department's income was \$26,940.50, as against \$28,532.50 for the year previous. The decrease was due to the passage of a law prohibiting foreign hunters shipping outside the state the deer they killed. As a result of the passage of this law, there was a marked falling off in the number of licenses issued to outside hunters. The receipts of the department from the sale of licenses for commercial fishing were, in addition, last year \$9,915, but practically all of this was needed for the expenses of the supervising commercial fishing, so that the expense of protecting the game animals was deferred largely from the income from the sale of deer hunting licenses."

Value of Fish and Game.
 "Now for the other side of the question. Here are some estimates prepared from the most accurate data the department has been able to gather of the importance of the commercial fishing industry: value of lands, boats and nets used in commercial fishing, \$2,500,000; number of men employed, 6,000, to which are paid salaries amounting to \$224,000; number miles gill nets used, 7,000; number of pounds of fish taken in 1911, 34,000,000 value, \$2,958,660. The following estimate on the value of our game may be interesting: Deer killed in 1911 12,000, the value of which was \$67,500; 150,000 hunters of small game killed small game to the value of \$300,000; value of fur-bearing animals killed in 1911, \$1,375,000; value of non-resident fishermen and hunters to Michigan, \$1,000,000."

"It is thus to be observed that the value of the fish and game and fur-bearing animals annually utilized in the state amounts to millions, and the expense of protection and supervision is less than \$40,000, defrayed entirely from the sale of licenses and from fees levied against commercial fishermen and hunters. This is the total amount provided for the pay and expenses of twenty-nine deputies who patrol 2,200 miles of lake coast, nearly 10,000 inland lakes, and 15,000 miles of streams, besides the natural baunts and territory frequented by game, millions of acres. From July 1st, 1911, to July 31st, 1912, the twelve months of my incumbency, \$13,257.98 in fines were collected and turned over to the state; \$1,642.51 from the sale of confiscated property; and fish and game to the value of \$4,230 were seized and sent to charitable and other public institutions of the state. A comparative statement of arrests and convictions of the twelve months of the previous year with the last twelve months reveals the following facts:

	1911	1912
Number of complaints investigated	1,462	1,736
Number of cases begun	842	971
Number convicted	735	831
Number acquitted	26	31
Number dismissed	16	20
Number pending	65	85
Amount of fines and costs	\$12,228	\$13,277
Arrests for violations of game laws	422	545
Arrests for violations of fish laws	429	425
Seizures reported	350	396
Proceeds of sales	\$1,658	\$1,842

Other States Spend More.
 "The money expended in Michigan for game protection is much smaller than in most states that have an equal quantity of game to protect. In the following cases the amounts available all came from the sale of hunters' licenses: California, \$126,724.25; Colorado, \$34,494; Idaho, \$37,108.50; Iowa, \$10,577; Louisiana, \$54,898.73; Missouri, \$39,239; New Jersey, \$62,721.50; North Dakota, \$28,967; Wisconsin, \$114,561.69. States in which the income from hunters' licenses was supplemented by other appropriation report the following amounts available last year for game protection: Ohio, \$44,000; Illinois, \$149,350; Minnesota, \$83,064; Pennsylvania, \$41,109. In New Jersey the last legislature appropriated \$40,000 for game preserves, and in Pennsylvania \$15,000 was appropriated for the same purpose."

"It will thus be seen that, all things considered, Michigan is looking after its work of game and fish protection at a much smaller cost than other states. An idea of the efficiency of the work in this state compared with some of the other states is readily gained from a comparison with the results obtained in Michigan and Wisconsin, in the light of the money available

UPPER PENINSULA

Hobo's Jewelry Arouses Suspicion

John Harrington, a one-legged hobo, who was arrested at Iron Mountain last week on a charge of drunkenness, was sentenced to the county jail for five days. He had about his person a large amount of good jewelry, which he was attempting to dispose of and which he claims to have purchased at a pawn shop in Winnipeg. He will be held until the authorities can investigate.

Shot Through the Lung

Rheinhold Herzog, the thirteen-year-old son of William Herzog, of Groveland, was accidentally shot through the lung last week. Rheinhold and a companion were wandering over the possession of a 22-caliber rifle when the gun was discharged and the bullet entered the boy's breast. Unless blood poisoning or traumatic pneumonia develops the boy will recover.

To Produce Musical Comedy

The Young Ladies' sodality of St. Mary's church at Iron Mountain has completed arrangements to produce the musical comedy in three acts entitled "All Gadsby's Fault" at the opera house on Monday evening, Sept. 30th. The play will be given under the direction of Miss Edna Getzendanner, of Chicago, a young woman of known musical ability and excellent drilling capacity. There will be one hundred young people in the cast—the best of the home talent. Miss Getzendanner has produced the comedy in many cities.

Made Long Automobile Trip

Dr. G. A. Treeman and family have arrived home from perhaps the longest automobile trip undertaken by any residents of Marquette. They were absent less than four weeks and in that time the doctor drove his car about two thousand miles. Among the cities visited were Milwaukee, Green Bay, Fond du Lac, Chicago, Kalamazoo, Detroit, Flint, Lapeer and Lansing. On the long trip the doctor had a broken axle to replace at Fond du Lac, and by a rather singular coincidence had a similar mishap at the same place on the return trip.

First Hunting Accident

Charles Beaudin, aged seventeen years, is lying at St. Mary's hospital, Marquette, his right hand shot off and his bowels perforated with a charge of buck shot, as the result of a hunting accident which occurred Sunday morning at Blackrock. Details of the mishap could not be learned last evening, but it is thought the boy was in the woods with a companion. It is supposed that he was drawing the gun toward him, probably with his hand over the end of the muzzle, and that the weapon was discharged.

The unfortunate boy was brought to the city on the M. & S. E. railway company's gasoline section car arrived in Marquette at noon and was met by the ambulance, in which the lad was taken to St. Mary's hospital. Sunday evening there were strong hopes of his recovery. Within twenty-four hours or so his condition will be such that his chances will be definitely ascertained. Directly the boy was taken to the hospital an operation was performed. The abdominal cavity was badly perforated with shot. The right hand was so badly shattered that it was at once amputated.

Beaudin lives at Birch. He had gone to Blackrock, three miles south of his home, early Sunday morning. The gun he was using was loaded with No. 4 shot, commonly known as "duck shot." He was taken aboard the section car at Blackrock.

Atlantic City, N. J., finds that this year one in every 12 of its inhabitants has been accused of crime and that over 600 cases await grand jury consideration in October.

Leadville district will this year produce 109,500,000 pounds of spelter from nine carbonate.

Los Angeles thus far this year has authorized buildings totaling in value \$22,598,793.

Government November 3 opens bids for leases on 100,000 acres of oil lands owned by Osage Indians.

Philadelphians are acutely for more playgrounds for public school children.

for the departments in those two states. The figures are:

	Wisconsin	Michigan
Total number of arrests made	952	971
Total number convicted	772	831
Total number acquitted and cases dismissed	69	49
Number of cases pending	32	89
Amount of fines and costs	\$20,938.82	\$13,277.95

Receipts from confiscations \$5,367.61 1,642.54

Game Protection Good Business.
 "The point I would accent," Mr. Oates concluded, is that game and fish protection is not a fad being pursued for the benefit of a comparatively small band of hunters. On the contrary it is good business. It conserves a resource that is of great financial importance. Game protection, leaving out all other considerations, makes trade by bringing money into the state, and it is secured in Michigan at a less cost, when the work to be done is considered, than in any other state in the Union."

"It should be the aim of the legislature to strengthen the laws where they are weak and constantly to aim at the more effectual protection of game and supervision of the lake fisheries, so that this great resource can be made safe for as long a period as possible in the future."

STUDENT TELLS OF NATIVE LAND

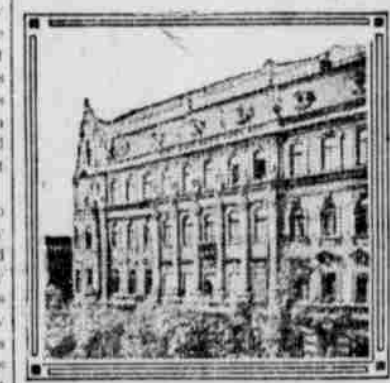

Girl Describes Life of the Girls in Poland

London—"We are all trying to be as English as possible in Poland just now. It is the fashion," said Miss Ila de Ilakowick, who came to London recently. This young student from Cracow university published a successful book of poetry in the spring. Accompanied by the daughter of the author, Slanciewicz, she has been spending some time in Paris and in other towns on the continent, and her comparisons prove her powers of observation.

"In Poland we wear English tailor-made clothes," she continued, "because we think they are much more distinguished looking than any other. English is, of course, spoken, for you know that we learn languages, French, German, Russian, dialects of our own tongue, from childhood. At the universities, of course, we study Greek and Latin. But English just now is the correct thing, and we are all speaking it. It is the thing in Poland now to put babies into nurseries furnished a l'Anglaise, and they are kept there. Polish babies, like the French ones, had to be always with the grown-up people; a great deal of attention had to be paid to them. Now they are in their own rooms, fed and dressed like English infants, and I dare say the mothers of the present generation find more time for interests outside of the house."

"Oh, no," she exclaimed in reply to a question. "You must not suppose that all Polish girls go to the universities, and you must not make the mistake of mixing us up with Russians—we are quite different! In the Polish families of the nobility parents still cherish the ideal of home life for their girls. No girl of good family goes out without a chaperone. She interests herself more in household duties even than English people do."

"Our whole system is different from the English. We have no colleges at all as you have for women, and we have no university halls where girls may live. A Polish girl may inscribe her name for lectures when she is 16. There are many middle-class parents

Facade of Cracow University.

who set their faces against this idea, and so they will not allow their daughters any income for their years of study. What happens? Why, the girls simply run away from home. At Cracow there is a convent where they can live for about 22 a month. Often a girl of 16 has to commence by working very hard to earn her living while she attends the university. The condition of students, both men and women, at the Polish universities, has been a good deal talked about, and I am one of many students, who are trying to raise a fund to establish women's residences like those you have in England."

"The proportion of girl students is something like 500 to 2,000 men. They attend the same lectures as the men, and often live in the same poor lodging houses as they do. I suppose it is for that reason that the parents have not learned to like the position of their daughters at the universities. The professors approve of girls at their lectures, but the majority of them do not. They declare that girls usually get married, and then all their university training is wasted. They make things as hard for the girls as they can by constantly indulging in what we call 'chicanes,' that is, teasing and small jokes leveled at the women students."

WEASELS CLAW HIS FACE

Then Scared Little Beasts From a Nest Find Victim's Coop and Slay 18 Chickens.

Lewistown, Pa.—James Stinebarger, better known as "Dynamite" on the state road operations where he is employed, has a badly lacerated face and says he hates to tell people how he got it. Those who were working with "Dynamite" however, aver it was too much weasel. They say Stinebarger was stooped over, taking out riprap stones, when a little ball of red and white fur leaped from a hole in the bank, landing squarely in his face, and scurried away as rapidly as possible. This one was followed in rapid succession by others, and each seemed to give him a dig in the face with all four feet. A strange coincidence was that the following night 18 of Stinebarger's favorite chickens were killed in the coop by weasels.

Wifey Gets It.
 "What is a beneficiary, pa?" "The woman who gets the ready money when her husband proves that his life insurance policy is good for something."

LOTS OF BEAUTIFUL, GLOSSY HAIR, NO DANDRUFF—25 CENT "DANDERINE"

HAIR COMING OUT—IF DRY, BRITTLE, THIN OR YOUR SCALP ITCHES AND IS FULL OF DANDRUFF—USE "DANDERINE."

Within ten minutes after an application of Danderine you cannot find a single trace of Dandruff or a loose or falling hair and your scalp will not itch, but what will please you most will be after a few weeks' use, when you will actually see new hair, fine and downy at first—yes—but really new hair—growing all over the scalp. A little Danderine will immediately double the beauty of your hair. No difference how dull, faded, brittle and weary, just moisten a cloth with Danderine and carefully draw it through your hair, taking one strand at a time. The effect is amazing—your hair will be light, fluffy and wavy, and have an appearance of abundance; an incomparable lustre, softness and luxuriance, the beauty and shimmer of true hair itself. Get a 25 cent bottle of Knowlton's Danderine from any drug store or toilet counter, and prove to yourself tonight—now—that your hair is as pretty and soft as any—that it has been neglected or injured by careless treatment—that's all—you surely can have beautiful hair and lots of it if you will just try a little Danderine.

EARLY MOLTING OF CHICKENS

Western Poultryman Gives Excellent Method of Controlling Hens in Changing Feathers.

Most people believe that if they can force their hens to molt early they will lay more eggs during the season, but this is not true. Hens that have molted late will lay more eggs during the winter than the early molters. This has been shown by the most careful experiments, but the facts are not generally known. Molting hens require a large amount of food containing nitrogen such as oil meal, meat and other feeds rich in protein. Molting can be forced by cutting down the feed of hens as it has been shown by experiments that recently fed hens begin molting earlier than those on full feed, but the former do not finish molting much earlier. Starved hens molt more uniformly than others and this is particularly noticeable in hens two or three years old. In an experiment conducted by the Cornell experiment station it was found that on a basis of 100 hens the fed flock produced eggs to the value of \$29.97 more than by the starved flock. The total income from all the birds was \$278 for the starved flock and \$350 for the fed flock, a difference in favor of natural molting for the year of about \$75.

A western poultryman of long experience gives his method of controlling molting as follows: As soon as the hens are through laying he turns them out on alfalfa, feeding them dry bran only, in addition. Under this treatment they get thin. Then he feeds them a mixed ration of grains and meat, giving a light feed in the morning and all they will eat at noon and night. Under this treatment they finish molting quickly, get new feathers and begin laying in September. By October 1 they are all in good laying condition and make a profit through the fall and winter.

Nautical Distinctions.
 "How do you tell the difference between a yacht and a sailboat?" said the girl with the inquiring mind. "By looking into the pantry," replied Captain Cleet. "If she carries plenty of refreshments and seagulls, she's a yacht. If it's mostly plain victuals, she's a sailboat."—Exchange.

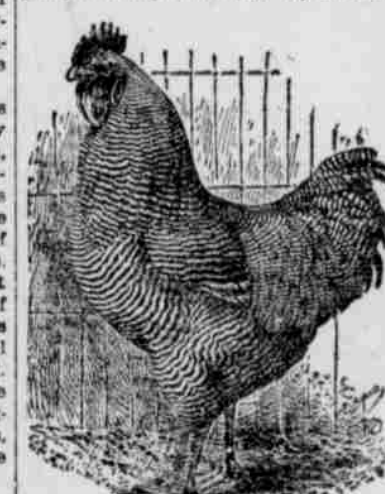

Felt the Sting of Failure.
 "What?" asked the hunter who had mistakenly shot a guide, bending down eagerly, "is your name?" "Smith," gasped the guide, with his last breath. The hunter's face fell. "And I came up here," he exclaimed, ruefully, "in pursuit of rare game!"—Puck.

Fruit growing is increasing in southern Ontario.

PLYMOUTH ROCK IS POPULAR

Blocky Shape Makes Them Excellent Breed for Broilers—Much Favored as Utility Fowl.

The Barred Plymouth Rock is without a doubt the most popular breed of chickens in this country—more of them are found on the farms than any other breed. On special poultry farms the Leghorn is a very popular breed, and in the poultry farming districts the Rhode Island Reds are almost exclusively used, says a writer in the Rural New Yorker. As a general utility fowl the Wyandottes

Prize Winning Rock.

are second in popularity to the Rocks, the white variety being the most popular. Their blocky shape makes them an excellent breed for broilers. Like the Plymouth Rocks and Rhode Island Reds, they lay a brown egg. The Leghorns lay a white egg, and in this respect they have a slight advantage, as most markets prefer the white egg, though there is no difference in the qualities of eggs with a brown or a white shell.

Up-to-Date Burglars.
 Burglars who forced an entrance into a jeweler's office in New York a few days ago carried with them an electrically driven drill for boring into the safe, which they proceeded to use successfully after connecting it with an electric light socket.

A Frost.
 "Have you purchased your new car yet, Mrs. Noorich?" asked the visitor. "No, Mr. Smithers, I ain't. I can't make up my mind whether to get a gasoline car or a limousine car. Maybe you can tell me—does limousine smell as bad as gasoline?" inquired the lady.—Harper's Weekly.

Russian talks of a canal to connect the Volga and the Black sea.

POULTRY NOTES

Overcrowding ducklings will induce feather-pulling. Kerosene is sure death to lice, if applied as a spray. Hens suffer from overeating as much as from starving. It is provoking to have hens steal their nests this time of the year. The feeding of onions to laying hens has produced an onion flavor in eggs. A hen egg-bound will be seen to visit the nest repeatedly without result. Fodder corn makes fine green food for poultry of all ages. Try it fed green. Many will realize this fall and winter that the early-hatched chick is the winter layer. It is not advisable to allow ducklings bathing water before the weather is warm and pleasant. Market at once all males not kept for breeders, and all pullets that have not kept pace with the rest of the flock.

Fruit growing is increasing in southern Ontario.
